

Crooked Lake Eurasian watermilfoil

Eurasian watermilfoil was discovered in Crooked Lake in 2002, at the boat launch, by John Skogerboe (Army Corp of Engineers). In 2004 0.5 acre at the boat launch was treated with aquatic herbicide: triclopyr in July and 2,4-D in September. Plants have been hand-pulled by snorkelers every year since. Number of plants pulled in 2010 is indicated.
